OXO Segment Product portfolio

OXO products applications

Thanks to our products everyday goods are flexible and user friendly. Guess how frequently you use them? The amount of industries they are used in is vast!

OXO Segment Mission / Vision

Mission

To deliver chemical products meeting customers needs.

Vision

We will become leading player in our industry. Our company will be a first choice supplier for the customer. We will achieve a highest value addend factor in our industry regardless of economic situation.

Strategic aim

Growth of sales and margins through market development, expanding port folio and product placement.

Activities

To introduce new generation plasticizers. To lengthen value chains. To perfect customer services employing innovative logistics solutions. To utilize new perspective market segments and markets. To optimize production and storage costs.

OXO Segment Production proces

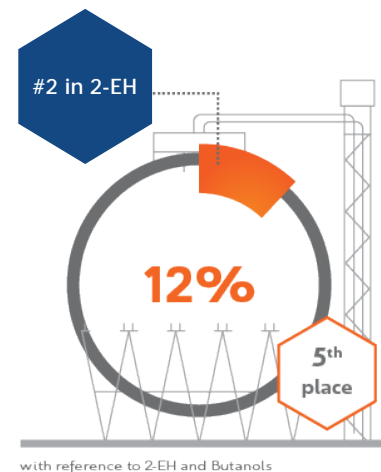

Market share in European Union

Plasticizers

- ✓ Our experience in plasticizers dates back to 1954
- ✓ We utilize two separate plants
- ✓ We are the largest European producer of DEHT/DOTP plasticizer - Oxoviflex®
- ✓ Yet we invest in future - specialty esters, and other OXO derivatives

OXO alcohols

- ✓ We've been producing OXO alcohols since 1986
- ✓ Our plant was modernised in 1998 and is one of the most modern in Europe
- ✓ Apart from OXO alcohols we supply their precursors i.e. n-butyraldehyde & isobutyraldehyde
- ✓ We serve customers globally

Oxoviflex®
innovative
and safe solution
for the future

Oxoviflex®

THE NON-PHTHALATE PLASTICIZER

Growing requirements and higher quality standards of plastics industry are the backbone of OXO Segment development. Thanks to our non-phthalate plasticizer Oxoviflex®, everyday goods are flexible and user friendly.

Oxoviflex® is innovative, non-ortho-phthalate PVC plasticizer which can be used also in food contact applications and child toys.

- ✓ Ecological profile = not classified
- ✓ No legal restrictions and limitations
- ✓ Safety
- ✓ REACH status - registered

OUR FUTURE

Specialty Esters Project (SEP)

SEP is a key development activity. The core part will be a new plant dedicated to innovative, specialty non-phthalate plasticizers including polyesters and bio-polyesters. The production plant will be accompanied by semi-industrial unit designed for developing and producing batches of new plasticizer types. They will be tested at Application Laboratory and at PVC converters production facilities.

OUR FUTURE

Research and Development Centre

Running advanced R&D works to develop new methods of manufacturing specialty plasticizers will be among the first tasks to be completed by the Research and Development Centre. These plasticizers will pose unique parameters and will be used not only as PVC plasticizers, but also as additives in other polymers and plastics.
